

Candor Health Education Data Privacy Statement

This notice discloses the data privacy practices for <https://candorhealthed.cognitionlms.com/>, the Candor Health Education Learning Management System (LMS) website. This notice is to inform visitors regarding our policies on the collection of data for anyone who chooses to use our pre and post program materials.

All data collected in the LMS is completely anonymous. There is no personally identifiable student data housed in the LMS. The only exception to this may be a school that has "Priority Partner" status and has agreed to allow Candor to track student performance in our programs longitudinally.

When a school registers for a program, a student count is reported to Candor. About two weeks prior to the program, a Candor employee sends the classroom teacher a list of random student login IDs and passwords. The teacher then distributes these IDs and passwords to students and directs the students to log-in to the website above. Candor has no access to student names, birth dates or any other personally identifiable information.

The data that is collected in the LMS is collected in aggregate. It includes pre/post assessment data and teacher and student survey feedback. This data can be used by the individual schools to view their students' performance. Candor can use the data to determine the effectiveness of the program, update and improve curriculum and enhance the overall student experience.

Empowering young people
to make informed decisions
